SUMMARY

Full-Stack Software Engineer with 4+ years building scalable web and e-commerce platforms across TypeScript/Node.js, Vue 3/Nuxt, Next.js, and Laravel. At Fincom Technologies I build MallPlus, a multi-vendor marketplace on Medusa v2, and I designed the AI-agent development pipeline the team now uses. It takes a ticket from plan to merge-ready with automated tests, browser QA, and code review, and runs several tickets in parallel. I learned to build software by hand long before AI tools, so the pipeline speeds up work I already know how to do. Since April 2026 I have handled 580+ tickets, with 540+ done or live in production. Strong in microservices, event-driven architecture, RDBMS design, and shift-left quality automation with Playwright. Experienced in mentoring engineers and conducting technical interviews.

WORK EXPERIENCE

Full-Stack Developer

Apr 2026 – Present

Fincom Technologies · MallPlus Marketplace

- Build and maintain **MallPlus**, a multi-vendor e-commerce marketplace on **Medusa v2** and the Mercur.js multi-vendor layer (Node.js/TypeScript), with Vue 3/Nuxt admin, seller-center, and storefront applications.
- Engineered autonomous **AI-agent development pipelines** ("loop engineering") on **Claude Code** that take a ticket end-to-end: plan → implement → test → QA → automated review. I run **5+ pipelines in parallel**, limited only by machine RAM.
- Built a **second brain** for the agents: 7,000+ markdown notes of decisions, verified results, and past mistakes that the pipeline checks before acting. A guard flags a known mistake before it repeats, and the agent asks me only when the answer is missing.
- Handled **580+ tickets** since April 2026, with **540+ done or live in production** and **1,000+ merge requests** merged. The volume comes from small, scoped MRs. I set the design, review every diff, and own each merge.
- Introduced AI-assisted development to the team and shared the workflow. The other developers now use it for their own work.
- Shipped full-stack after-sales features: returns & refunds, seller-dispute resolution, escrow, order fulfillment, and webhook-driven notifications between the marketplace and a **NestJS** ticketing service, with an outbox so no customer concern is lost or duplicated.
- Built role-based access control and masked customer data with audited reveal for the customer support ticketing system.
- Integrated **GCash** payments and multi-vendor commission, payout, and escrow flows, preserving financial integrity across buyer, seller, and platform.
- Built browser-driven QA with **Playwright** that verifies each acceptance criterion and produces annotated video walkthroughs as release evidence.
- Implemented an automated **GitLab merge-request review loop** that gates every change on a passing AI code review before human review, cutting reviewer load and defect leakage.
- Built **n8n** automations that connect Jira, Google Sheets, Slack, and Telegram.
- Deliver within a Jira/GitLab SCRUM pipeline with strict branch, QA, and code-review gates across local, dev, staging, UAT, and production environments.

Senior Full-Stack Developer (Tech Lead)

Feb 2024 – Apr 2026

Betrnk Tours · BGC, Taguig City

- Developed full-stack applications using **Laravel** (backend) and **React/Next.js** (frontend), improving system scalability and reliability.
- Designed and maintained relational database systems, improving data management and application performance.
- Implemented multi-tenant, microservice architectures over HTTP APIs, **Apache Kafka**, and **RabbitMQ**, using the Saga pattern for distributed transactions and event-driven communication.
- Built and maintained Kafka producers and consumers for asynchronous processing, service decoupling, and high-throughput data pipelines.
- Introduced feature-flag strategies and idempotency techniques for consistent, reliable operations across distributed systems.
- Created unit tests with **Pest** and end-to-end tests with **Playwright**, strengthening quality assurance.
- Mentored and onboarded 5 developers; managed projects end-to-end with strong version-control practices; conducted 15+ technical interviews.

Junior Full-Stack Developer

Jun 2022 – Feb 2024

Halcyon Agile

- Collaborated on CMS, e-commerce, and service-marketplace websites using **ReactJS/Next.js**, **Node.js**, and **Laravel**.
- Applied SCRUM Agile methodologies, delivering high-quality solutions and improving project timelines by ~15%.
- Designed and maintained MySQL database structures for optimal performance on service-focused platforms.
- Managed version control with Git, enabling seamless collaboration and integration across teams.

SKILLS

LANGUAGES

TypeScript · JavaScript · PHP · SQL

FRAMEWORKS & PLATFORMS

Node.js · Medusa v2 · Vue 3 / Nuxt · Next.js · React · NestJS · Laravel

ARCHITECTURE & DATA

Microservices · Event-Driven (Kafka, RabbitMQ) · REST APIs & Webhooks · PostgreSQL · MySQL · Redis · Docker

AI & AUTOMATION

AI Agent Orchestration (Claude Code) · AI Memory / RAG · MCP · n8n · Automated Code Review

QUALITY

Playwright / E2E · Pest · Vitest

PRACTICES & TOOLS

Agile / SCRUM · Git / GitLab CI · Jira · Mentoring & Tech Interviews

EDUCATION

Bulacan State University

Bachelor of Science · Information Technology

Aug 2018 – Aug 2022
