SUMMARY

Full-stack software engineer with 4+ years building web and e-commerce platforms in TypeScript/Node.js, Vue 3/Nuxt, Next.js and Laravel. Runs five Claude Code agents in parallel that take tickets from plan through build, tests, browser QA and code review on their own, on one 16 GB machine and one Claude subscription. The agents learn from their own errors through a shared knowledge base that blocks known mistakes from repeating, and every change is reviewed and signed off before it merges. Built distributed systems by hand before AI tools, including Kafka microservices, saga transactions and payment flows, and led a team of five as tech lead.

580+ tickets handled | **1,000+** merge requests | **4,340** lessons captured | **7,836** repeat errors prevented

WORK EXPERIENCE

Full-Stack Developer

Apr 2026 – Present

Fincom Technologies · MallPlus Marketplace

- Build **MallPlus**, a multi-vendor marketplace for the Philippines on **Medusa v2** and Mercur (Node.js/TypeScript), with Vue 3/Nuxt admin, seller center and storefront apps.
- Designed an **AI agent workflow on Claude Code** that takes a ticket from plan to merge request: hardened acceptance criteria, phased build, tests, **Playwright** browser QA with a video walkthrough, and an automated review loop that runs until it approves.
- Run **five agents in parallel**, each in its own git worktree, on one 16 GB Mac and one Claude subscription. RAM, CPU and subscription usage are the only limits on adding more.
- Built the agents a **second brain** of 7,000+ notes (decisions, verified results, past mistakes). Each error becomes a lesson, and a guard checks every step against them: **4,340 lessons** captured and **7,836 repeat errors prevented** so far.
- Handled **580+ tickets** since April 2026, with **540+ done or live in production** and **1,000+ merge requests** merged. Merge requests are small and scoped, and none merges without my review.
- Shipped after-sales and money flows: returns and refunds, seller disputes, escrow, **GCash** payments, commission and payouts, keeping buyer, seller and platform balances consistent.
- Built a **NestJS** customer support ticketing system with role-based access, SLAs, escalations and masked customer data with audited reveal, connected to the marketplace by webhooks and an outbox so no concern is lost or duplicated.
- Built **n8n** automations across Jira, Google Sheets, Slack and Telegram, and introduced the AI workflow to the team, who now use it for their own work.

Senior Full-Stack Developer (Tech Lead)

Feb 2024 – Apr 2026

Betrnk Tours · BGC, Taguig City

- Built full-stack applications with **Laravel**/Filament and **Next.js**, and designed their relational databases.
- Implemented multi-tenant microservices over HTTP APIs, **Apache Kafka** and **RabbitMQ**, using the Saga pattern for distributed transactions, plus feature flags and idempotency for reliable operations.
- Wrote unit tests with **Pest** and end-to-end tests with **Playwright** across all systems.
- Mentored and onboarded 5 developers, owned projects end to end, and ran 15+ technical interviews.

- Projects: LINE marketing platform, company landing and booking system, casino cage system with live forex rates, e-wallet API, coupon and ads SaaS on microservices.

Junior Full-Stack Developer

Jun 2022 – Feb 2024

Halcyon Agile

- Built a learning management system, two e-commerce platforms and a multi-tenant SaaS platform with **Node.js**, **Next.js**, **Laravel**/Filament and Tailwind CSS.
- Implemented the Saga pattern with idempotency on Kafka-based microservices across 5 services (inventory, CMS, users, payment, wallet).
- Worked in SCRUM, improving delivery timelines by about 15%, and designed MySQL schemas for service-focused platforms.

OPEN-SOURCE PROJECTS

MerchantFlow **331 tests**: Cross-border e-commerce operations with saga orchestration, a transactional outbox, HMAC webhook verification and BullMQ.

FlowBoard **202 tests**: Real-time collaborative Kanban board with Socket.IO, Redis pub-sub and role-based access.

AI Booking Agent **139 live assertions**: n8n salon booking agent where a Postgres constraint makes double bookings impossible.

BookIt **130 tests**: Booking system with CQRS command and query handlers and real-time availability.

SKILLS

AI & Automation: Parallel AI agents (Claude Code), self-learning agent memory, MCP, automated code review, n8n

Languages & Frameworks: TypeScript, JavaScript, PHP, SQL, Node.js, Medusa v2, NestJS, Vue 3, Nuxt, React, Next.js, Laravel

Architecture & Data: Microservices, Kafka, RabbitMQ, saga and outbox patterns, REST APIs, webhooks, PostgreSQL, MySQL, Redis, Docker

Quality & Practice: Playwright, Pest, Vitest, GitLab CI, Agile/Scrum, mentoring, technical interviews

EDUCATION

Bulacan State University, Bachelor of Science in Information Technology Aug 2018 – Aug 2022
